

Where is the world finding answers?
Biotechnology.

More than 325 million people worldwide have been helped by the more than 200 drugs and vaccines developed through biotechnology. Future breakthroughs may lead to treatments and even cures for some of the world's most debilitating and rare diseases.

Biotechnology also helps drive our nation's economy, creating high-wage jobs with a high multiplier effect. The more than 1.42 million Americans employed in the biosciences create an additional 6.6 million jobs, for business services, contractors and other vendors.

And we're just getting started.
